

DVE Telepresence Room™

The Big Picture for True Telepresence!

The patented DVE Telepresence Room is based upon a new standard for group telepresence communication that ingeniously conceals an HD camera behind an immersive wide aspect ratio HD screen. With over ten years of development, specialized optics has been created to maximize the depth resolution of HD. The DVE Telepresence Room maintains a true HDTV format perspective with a single large screen experience. The DVE Telepresence Room has been designed for 4 life-size people to be seen in the first tier and an optional 4 more in a second tier. That means a total of 16 people can communicate together in a single conference. Unlike older systems that require many plasma panels side-by-side, the DVE Telepresence Room is an immersive large screen experience that images people standing and walking about. The large single screen is undoubtedly the new standard for high-end group telepresence that can display cinema, stunning corporate presentations, and also, an immersive data screen, all maintained in pristine HD/graphics resolution with a wide aspect ratio.

- ▶ Single large immersive HD wide screen
- ▶ Hidden eye level perspective camera
- ▶ Up to 16 people engaged in a single conference
- ▶ Simplistic hardware design uses only a single camera & a single video stream per site
