

DVE Tele-Immersion Room™

The Ultimate Telepresence and Collaborative Meeting Experience

The patented DVE Tele-Immersion Room is the world's most realistic group conferencing experience where the conferees appear in the 3D space of the room. The experience enables life-size people to be imaged on a transparent image plane where they appear to walk about freely in the meeting room. The DVE Tele-Immersion Room further includes an HD camera located behind the conferee's images for a perfect eye level perspective of the room. The DVE Tele-Immersion Room is installed as a turnkey audio visual environment within a luxurious designer meeting room. Every last detail has been thought through to ensure a seamless operation for telepresence, presentations, and 3-D visualization. DVE has formed a strategic alliance with Christie Digital Systems to assist in the integration of Christie's industry-leading Mirage HD 3D projectors. Many plasma panels on the wall from our competitors cannot even come close to the effective experience of the DVE Tele-Immersion Room. Industry leaders have heralded the DVE Tele-Immersion Room as a milestone development in the history of conferencing. *Please contact DVE for a demonstration.*

- ▶ True augmented reality conferencing
- ▶ Eye level mounted camera
- ▶ Full presentation environment
- ▶ Imaged people can be seen walking about in the physical room
- ▶ High-end digital cinema
- ▶ Volumetric 3D visualization of 3D objects up to 9 feet wide floating in air
- ▶ Optional stereoscopic 3D visualization
